NOTES:
1- This construction required for all conductors having a breaking strength of more than 4500 pounds.
2- Maximum transverse load is 1000 lbs. per conductor
3- If pole top brackets are used with 25kV construction, gain both sides of pole top and maintain 2 inches minimum clearance between pole top insulators.
4- 25kV offset pole top pins may be used in lieu of two standard 25kV pole top pins, two pole top brackets, and two pipe spacers.

NOTES:
1- Side groove of insulator must always be larger than the overall diameter of conductor including armor rods when required.
2- Center phase wire or neutral wire may be located on the opposite side of the pole where necessary to avoid crossing of wires in midspan.
3- This construction required for all conductors having a breaking strength of more than 4500 pounds.
4- If transverse load exceeds 2000 lbs per conductor, use vertical construction.

NOTES:
1- Specify items "ca" and "cc" from standard drawings CU-5, CU-6, AC-10 and AC-11.
2- Maximum unbalanced conductor tension not to exceed 2300 lbs. per conductor.
3- Not recommended for conductors with breaking strength greater than 5000 lbs. Limits may be exceeded with proper guying.
4- For 25kV add extension link to middle phase.
5- Specify use of polymer suspension insulator in lieu of porcelain suspension by adding the subscript "P" to the standard number.
