

## **Transportation Project Specialist - Sr**

### **TDOT Maintenance Division Pavement Management Office**

This engineering position assists with development and analysis of pavement resurfacing projects and their long term performance. Under general supervision, responsibilities include: maintenance, analysis, and reporting of pavement roughness and distress data; development and application of decision trees and optimization procedures for selection of resurfacing projects; review of engineering plans, specifications, and cost estimates; coordination with TDOT Design, Safety, Structures, Programming and other offices for development of the pavement resurfacing project development work flow and guidelines; and development of a state Transportation Asset Management Plan (TAMP). Other duties include: field visits for pavement evaluations and providing recommendations for resurfacing projects. The office is located at TDOT Headquarters (505 Deaderick St) in downtown Nashville. Statewide and occasional out-of-state travel is required.

### **Preferred Qualifications:**

- Engineer Intern Certification or Professional Engineer License.
- M.S. degree in Civil Engineering from an accredited college or university.
- Experience with data analysis, pavement construction, and design.
- Strong written and verbal skills.
