Average Daily Traffic

Report prepared by the Tennessee Department of Transportation
Bureau of Planning and Development
In cooperation with the
U.S. Department of Transportation
Federal Highway Administration

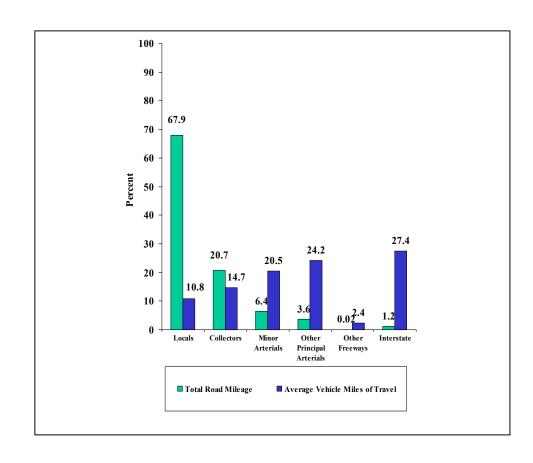

PREFACE

The Traffic Volumes shown of the following maps are a summary of all the counts made a the portable and continuous Automatic Traffic Recorder Stations by the Bureau of Planning and Development. The counts are made annually from January thru December and adjusted to represent (2000) Average Daily Traffic by using factors obtained from the 28 continuous stations strategically located throughout the State. These counts represent the estimated traffic using the facility during the (2000) traffic year under conditions existing at that time and should not be used for design purposes without further study.

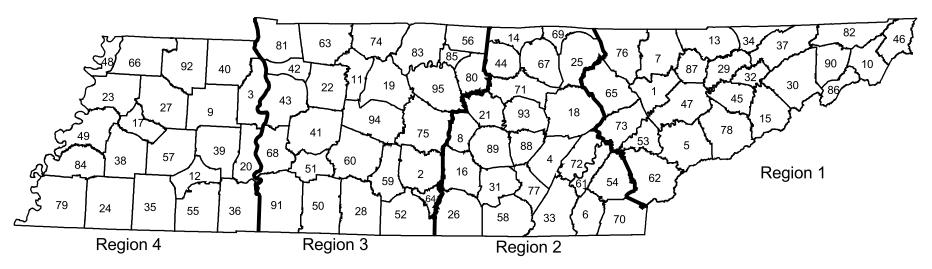

TOTAL ROAD MILAGE AND VEHICLE MILES OF TRAVEL IN TENNESSEE

Tennessee roads and streets are grouped into functional class according to the character of service they provide. In Tennessee the Interstate System accounts for only 1.2 percent of the State's total miles of roadway; however, 27 percent of total travel occurs on this system. The local system accounts for 68 percent of the State's total road length but only 11 percent of total travel. The Interstate, Other Freeways, and Other Principal Arterials provide the highest level of mobility at the highest speed for a long uninterrupted distance. The Collector system provides a lower level of mobility at lower speeds and for a shorter distance. The Collectors connect Local roads with Arterials. The Local system provides access to adjacent land but limited mobility. The Locals carry traffic to the Collector roads. The following graph illustrates the comparison between total road mileage and Annual Vehicle Miles of Travel. The percentage of travel on the Interstate System is he Largest while the percentage of mileage is very small.
