TOTAL ROAD MILEAGE AND VEHICLE MILES OF TRAVEL IN TENNESSEE

Tennessee roads and streets are grouped into functional class according to the character of service they provide. In Tennessee the Interstate System accounts for only 1.16 percent of the States's total miles of roadway; however, 29.17 percent of total travel occurs on this system. The local system accounts for 70.29 percent of the State's total road length but only 14.09 percent of total travel. The Interstate, Other Freeways, and Other Principal Arterials provide the highest level of mobility at the highest speed for a long uninterrupted distance. The Collector System provides a lower level of mobility at the lower speeds and for a shorter distance. The Collectors connect Local roads with Arterials. The Local System provides access to adjacent land but with limited mobility. The Locals carry traffic to the Collector roads. The following graph illustrates the comparison between total road mileage and Annual Vehicle Miles of Travel (VMT). The percentage of travel on the Interstate System is the largest while the percentage of mileage is very small.
