Andy,

After further review, we believe this fiber is the result of a mapping error in our records. Our older CAD drawings identify the 24-count fiber as a "future" facility that was never placed. During the migration of our legacy CAD data into our ArcGIS mapping system, it appears the facility was inadvertently converted into an active cable record.

I have coordinated with our local Field Services team, and they concur that no existing TDS facilities are present in the project area that would create a conflict with the proposed improvements.

Based on our current records review and field verification, TDS does not anticipate any conflicts within the project limits.

Please let me know if you have any additional questions.

Thanks,

From: Parr, Andrew <Andrew.Parr@arcadis.com>

I have looked into this 24-count fiber more closely and have dispatched one of our Field Services technicians to verify whether the fiber actually exists. The fiber in question dead-ends in both directions, and our 15-year-old CAD records show it as a "future" fiber. I will provide an update once I have received confirmation.

Doug,

Do you have any CADD files or shape files available that contain the fiber line's location? If so would you be able to provide that to us?

Doug,

My previous email was too large for your inbox. I'll try this again.

I am reaching out because we had a response on the early utility notify letter that indicated TDS telecom has facilities on the subject project. I have attached a plan sheet (JPG) showing the improvements to the SR-114 interchange at I-40. After reviewing the survey data we have I could not locate the 24-strand fiber. Can you please provide a drawing with the location of the fiber line so we know where it is located?

Thanks,

Andy Parr P.E.
