Notes:

1. This table is based on the requirements established in the 2018 AASHTO Manual for Bridge Evaluation.
2. Controlling location is given both by the distance from the left support on that span and the fraction of that span. Ex: 28.5' - 50%
3. Controlling force is provided as flexure, shear, or stress together wih the corresponding limit state. Ex: Strength I - Flexure

Deck

Note: In Stringer model, Main Girder 1, 3, 5, 7 (shown in the following figure) are modeled using the same stringer section W24x84. The section stiffnesses are increasd to mimic main girder stiffnesses. A higher grade steel is also used for Main Girder 1, 3, 5, 7, so that they cannot control.

(Main Girder elements circled in red is modeled with identical sections but increase stiffnesses.)

Note: As the result of Main Girder 1, 3, 5, 7 are modeled with increased stiffnesses. The stringer model can realistically simulate the behavior of the stringer elements. As shown in the following figure, the stringer elements have larger deflections than the main girder elements, and therefore less load is applied to the stringer elements.

Note: The stringer model only includes structural member in between the exterior girders. Loads from the sidewalks and overhangs are assumed to be 100% taken by the exterior girder and therefore not included in the stringer mode. This model is dedicated to create a realistic environment for the interior stringers.
