

New Title Sheet¹

The new Title Sheet is a seed file now and not a cell file. It is an all in one sheet for the life of the project. There is no need to have a different Title Sheets for different phases of the project. This new Title Sheet will standardize where everything is located on the sheet and how they look. This new sheet has new levels just for it. The new levels are from 400 to 460. The sheet has specific levels for Preliminary, Right-of-Way and Construction phases as well as TDOT designed and Consultant designed projects. For the different phases of the project you turn off the levels you do not need, or turn on the levels you do need. For projects that need more than one Traffic Data block, there are 3 blocks on different levels embedded in the sheet. Other blocks embedded are; Design Exception, Road To Be Closed, No Exclusions and Exclusions. Each block has its own level. See figure Level 1, for levels as displayed in MicroStation.
