

Who we are:

Transportation is so basic that many of us overlook its overwhelming importance in our daily lives. Practically everything used in our homes, offices, or schools across Tennessee – from furniture to food items to clothing – requires a large and complex transportation network. The Tennessee Department of Transportation provides citizens of Tennessee and travelers with one of the best transportation systems in the country. TDOT is a multimodal agency with responsibilities in building and maintaining roads, aviation, public transit, waterways, railroads, cycling and walking. Our involvement ranges from airport improvements to funding transit buses to planning for river ports. The Department of Transportation has approximately 3,500 employees with four statewide region facilities in Knoxville, Chattanooga, Nashville, and Jackson. TDOT Aeronautics is located near the John C. Tune Airport in Nashville, TN.

Statewide Lighting Transportation Engineer Traffic Design Division – Traffic Services Section Nashville, TN \$115,008 annually

Job Overview

The Statewide Lighting Transportation Engineer is a statewide transportation engineer position that will manage all aspects of TDOT's lighting program within Traffic Services. This position will provide support to Project Teams directly responsible for delivering projects for all phases of the Project Delivery Network (PDN) in accordance with the project's scope, budget, and risk. These projects will range in complexity and risk from simple to exceedingly complex. The purpose of this position, which functions as a Statewide Lighting Transportation Engineer, is to coordinate and oversee the development of the lighting program as developed by the unit and consultants to ensure uniform and comprehensible visual systems for these devices.

This position will serve as the Statewide Lighting Transportation Engineer for TDOT, establishes the design and standard application of lighting including their supports and authorizes their use on state trunklines for the purpose of improving motorists' safety and operational efficiency. This work includes developing standards, reference guides and manuals, as well as preparing correspondence, reports, programs, contracts, and work authorizations at the region and headquarters. This position must effectively articulate technical lighting concepts through training, mentoring, and collaborating as part of a matrix organization. The Statewide Lighting Transportation Engineer assists with monitoring and managing the scope, schedule, and budgets of all transportation lighting projects and working with the Project Management Division to make the required adjustments as necessary to ensure that the work completed is in alignment with the Department's Asset Management and Strategic goals.

Essential Job Responsibilities

Serve on Project Teams as part of a matrix organization by providing technical expertise related to transportation lighting elements for both stand-alone projects and in support of larger roadway design project visions for those projects having the highest complexity; adhere to traffic services-related critical goals and intended outcomes for the scope, schedule, budget, and quality in coordination with the Project Manager, applying context-sensitive design strategies; implementing innovative concepts; proactively assessing risk factors.

Ensure exceptional customer service to both internal and external customers by exercising effective listening skills, providing prompt responses, maintaining complete and accurate documentation, and communicating effectively.

Remain current on national best practices related to traffic services and on the Manual on Uniform Traffic Control Devices (MUTCD) within TDOT's Traffic Design

Division as it relates to transportation projects, facilities, and operations activities; serve in the role of the Statewide Lighting Engineer to ensure compliance with the standards, specifications, and design of lighting and electrical standards, assist with the development of plans, legislation, and regulations that seek to increase traffic technologies, inspire innovation, and improve mobility for TDOT employees, contractors, and the traveling public; and integrate traffic considerations and statutory and regulatory requirements into TDOT's guidance documents, processes, and procedures.

Routinely identify, document, and effectively collaborate with the Traffic Services Section acquiring knowledge that includes maximizing project successes, acknowledging national best practices, and avoiding past errors. Assist with modifications to all applicable policies, procedures, design standards, manuals, specifications, and special provisions.

Serve as the Lighting Program Specialist for the department to review and give approval of the lighting program, including lighting plans developed by consultants and in-house for contract letting and in support of Design's projects. Review and give final approval to design and attend meetings for plans prepared by consultants or in-house.

Provide technical expertise that ensures the contractual agreements, scope, schedule, budget, and quality of all traffic services projects support the delivery of the Department's Work Program while also ensuring compliance with Federal and State traffic design and regulations.

Creates, reviews, and maintains contractual agreements with other agencies to operate and maintain the system lighting upon completion of construction. Assists Regions with the interpretation of the contract and ensures alignment with the statutory and regulatory requirements.

Assist in the development of training that addresses acquired knowledge, traffic lighting objectives and technical design elements related to transportation for the purpose of improving team performance, creating a stronger understanding of the transportation industry, inspiring new ideas, and developing skills.

Maintain and update the department's lighting inventory system, coordinate and work collectively with the asset management division. Responsible for the maintenance and updates the department's lighting inventory system.

Qualifications

- Bachelor's degree in engineering
- Licensed Professional Engineer (PE)
- 12 years of demonstrated competency in lighting design in the traffic engineering field

Ideal Candidate

The Statewide Lighting Transportation Engineer is a dedicated engineer who is passionate about improving transportation safety and efficiency through innovative lighting solutions. They collaborate with multidisciplinary teams to integrate seamless lighting solutions into transportation projects and suggest upgrades or modifications to enhance visibility and energy efficiency. They stay up-to-date with the latest advancements in lighting engineering and design to ensure that their work is top-notch. The Statewide Lighting Transportation Engineer is committed to safety, sustainability, and innovation, and takes pride in their work.
